

ABSTRACT

A mounting bracket (10) for holding a disk drive (30) includes a bottom wall (12), a first sidewall (14) extending upwardly from one side of the bottom wall with two locating pins (16) protruding inwardly therefrom corresponding to two fixing holes defined in a sidewall of the disk drive, a second sidewall extending upwardly from an opposite side of said bottom wall for sandwiching the disk drive with the first sidewall, and locking means for engaging with a second sidewall of the disk drive to retain the disk drive in the mounting bracket. In assembly, the disk drive is placed in the mounting bracket, and the locating pins are inserted into the fixing holes of the disk drive. With the other sidewall of the disk drive secured to the fixing structures of the mounting bracket, the disk drive is secured in the mounting bracket.
